To Whom It May Concern:

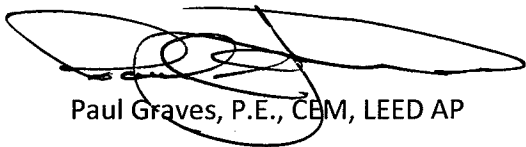

I recently attended a "Fundamental's of Carbon Reduction" seminar lead by Eric Woodroof, Ph.D. I thought that this program was an excellent course and answered many of the questions that we have about the industry/market at this time and provided us with the technical and procedural information to address many of the questions we are currently receiving from our clients.

Eric has a great personality that enabled him to get the class involved in timely discussions about current issues facing many of those dealing with developing, managing, and/or contemplating carbon footprints. These discussions brought out many of the challenges in developing a program where not all of the "knowns" exist in a currently voluntary market. The information shared added significantly to the content of the course.

Of even greater value was Eric's ability to place the development of Carbon Reduction programs into the big picture (i.e. including competing interests, energy management programs, infrastructure development projects, financing, and performance contracting) to enable those attending to see how an entire program could be adapted to meet the needs of a particular institution.

In summary, the presentation skills, current market knowledge and experience, and an exhaustive reference library made this course very timely and valuable.

Sincerely,

A handwritten signature in black ink, appearing to read "Paul Graves", is written over a large, loopy scribble that extends across the width of the signature area.

Paul Graves, P.E., CBM, LEED AP
